

# ***VOS INDUSTRIAL***

Delivering future solutions today.

# Global Expertise

In a challenging industry, where economic, environmental, and safety constraints are ever present. Vos Industrial deliver a complete solution to help alleviate these issues.

We are able to recover product, reduce waste, and reduce man-entry. Whilst simultaneously, reducing the execution duration by 60%.

*"It's time to deliver a true, safe and sustainable approach to our industry".*

## Products

- Crude Oils
- Heavy Fuel Oils
- Tar / Bitumen
- White Oil

## Tanks

- Floating Roofs
- Fixed Roofs
- Spheres
- Buried

# Product Recovery

Our unique solutions are able to liquify heavy sludge and solid deposits, resuspending into a pumpable state. This enables recovery of perfectly good product.

- Our additives are hydrocarbon derived and are perfectly miscible with the storage and refining processes.
- Recovery of up to 80% or greater in 2 weeks.
- Results guaranteed by sludge analysis and profile mapping.

Our goal is to deliver a true sustainable solution to all terminal operators and refineries.

# Chemical cleaning

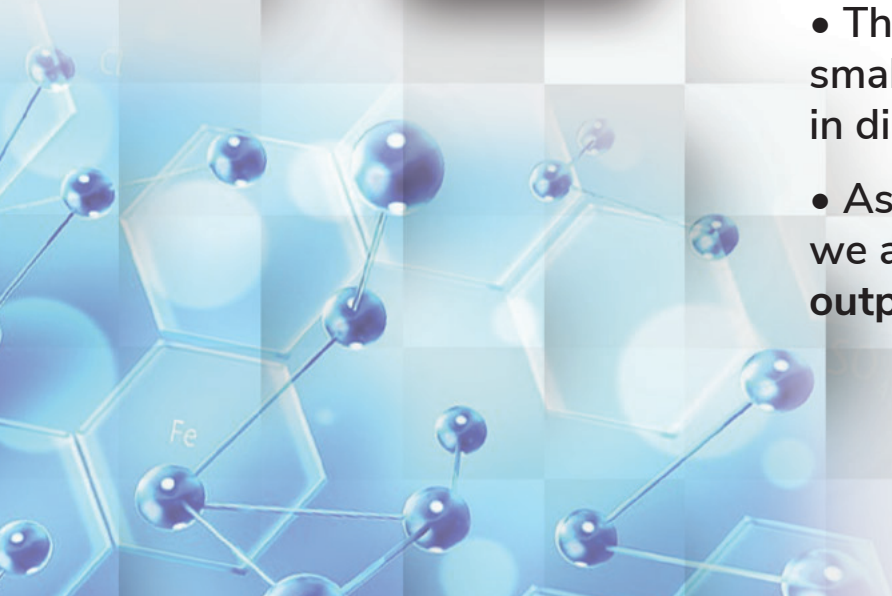

A unique process that allows cleaning without man entry.

The operation is continuously monitored throughout, to ensure a stable emulsion.

---

- A method that delivers **greater control, more precision and un-matched safety.**
- This is best applied to tanks smaller than 30 meters in diameter.
- As with all other applications, we are able to **reduce the waste output.**

# Non-man Entry Cleaning

Introducing our complete suite of non-man entry systems for tank cleaning.

- **RIN** (Resuspension Injection Nozzles). Being able to pin-point heavy deposits to liquify them. This system delivers the most efficient means of resuspension.
- **ROCCS** (Remote Operated Cleaning Cannons), This is a perfect application when used in combination with our resuspension process and our cleaning agents.
- **Resuspension Cannons** (Side mounted), When the roof cannot be utilised, then these cannons can be installed. Providing a solution for your problem tanks.
- **The 360° spinning head.** This system is at the core of our chemical cleaning process and is a simple set up (smaller tanks <30mtr Diameter).

*"An overwhelming 86% of survey respondents expressed a preference for 100% 'no man entry' tank cleaning at their terminal."*

Published in Hydrocarbon Engineering Feb 2021

# Waste Minimisation

Our objective as with all our applications, is to minimise the waste output.

**A designed approach for each individual tank:**

- Sludge and volume analysis
- Laboratory tests
- And an engineered solution

*It's all these small things, which help deliver success.*

**A measurable operation, that can count towards your sustainability & carbon footprint KPI's.**

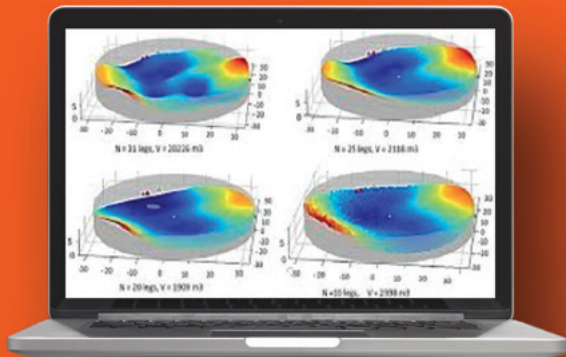

**We are able to achieve a reduction of waste by 80% or more. Thus removing the largest cost element of tank cleaning.**

# Supported services

To aid our portfolio of services, we have partnered with some companies who lead the world in their disciplines.

- Ultrasonic Sludge Profiling.
- On-line tank floor inspections.
- On-line Tank seam inspections.
- Tank and Vessel Degassing

All with a common goal:  
**ZERO MAN-ENTRY**

“Let us engineer a solution for you!”
